# VS Code

**EXTENSIONS**

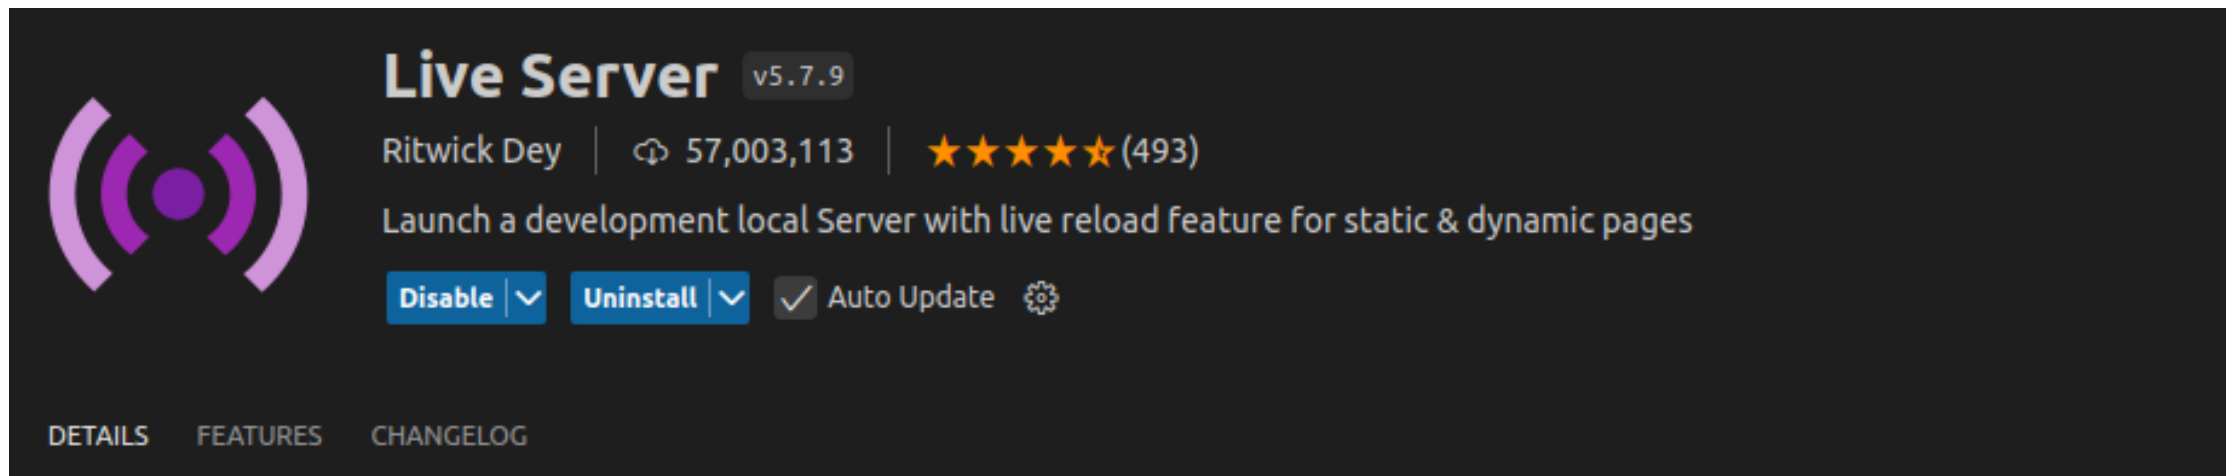

You Need

Follow for more Developer Tips...

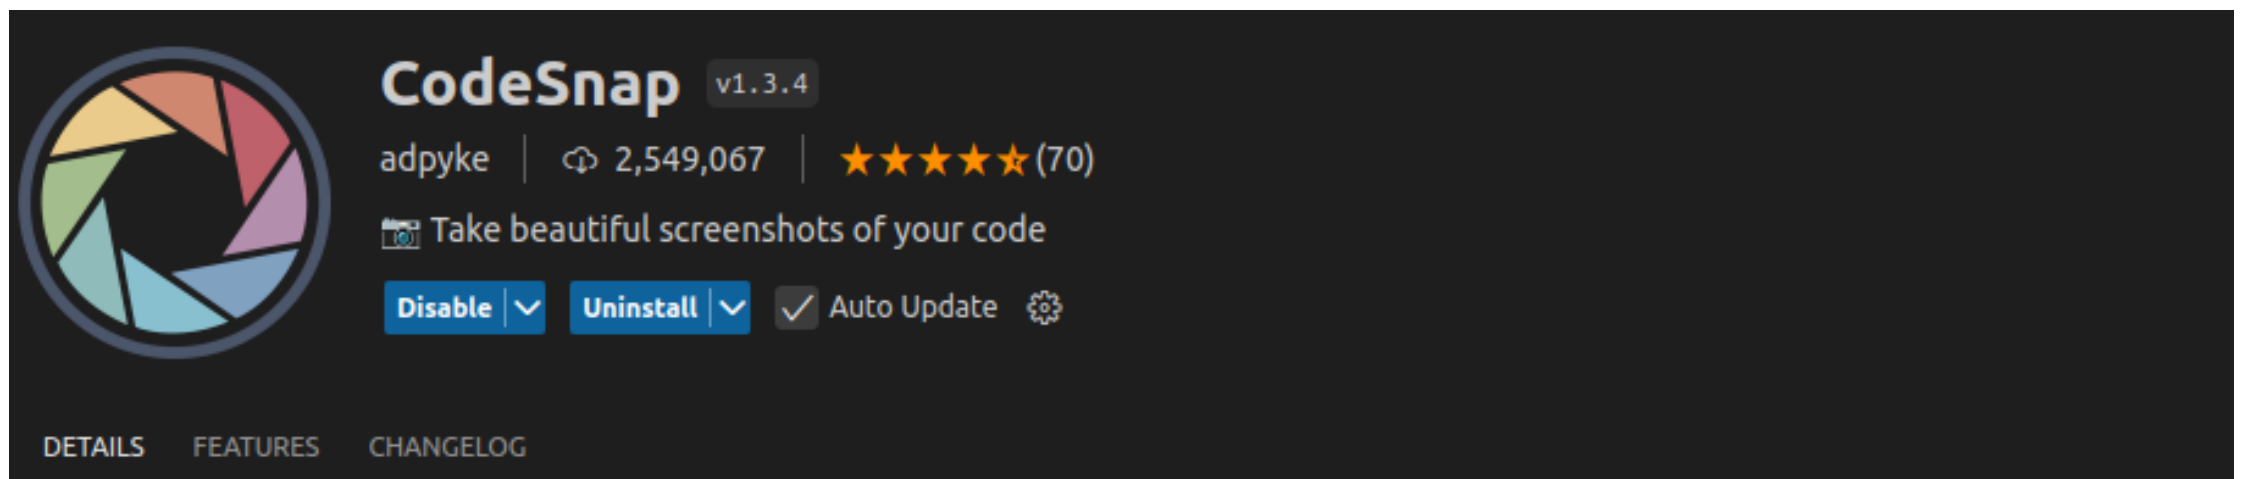

# Live Server :-

This extension launches a local development server with live reload, allowing you to see your changes in real-time without refreshing the browser. It's perfect for HTML, CSS, and JavaScript projects, saving time and boosting productivity.

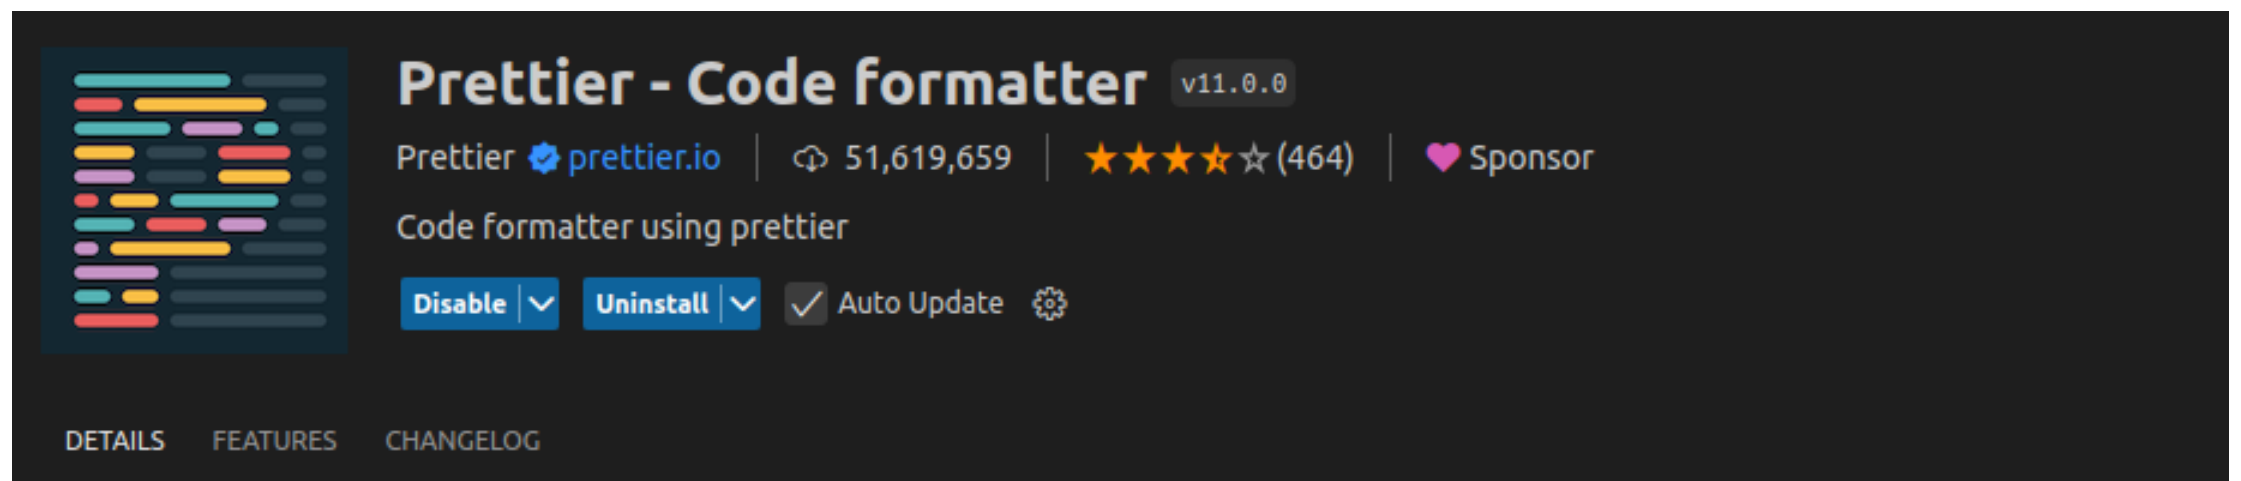

# CodeSnap :-

CodeSnap allows you to take beautiful screenshots of your code directly within VS Code. It's perfect for sharing snippets on social media, blogs, or presentations, with customizable themes and layouts for a professional look

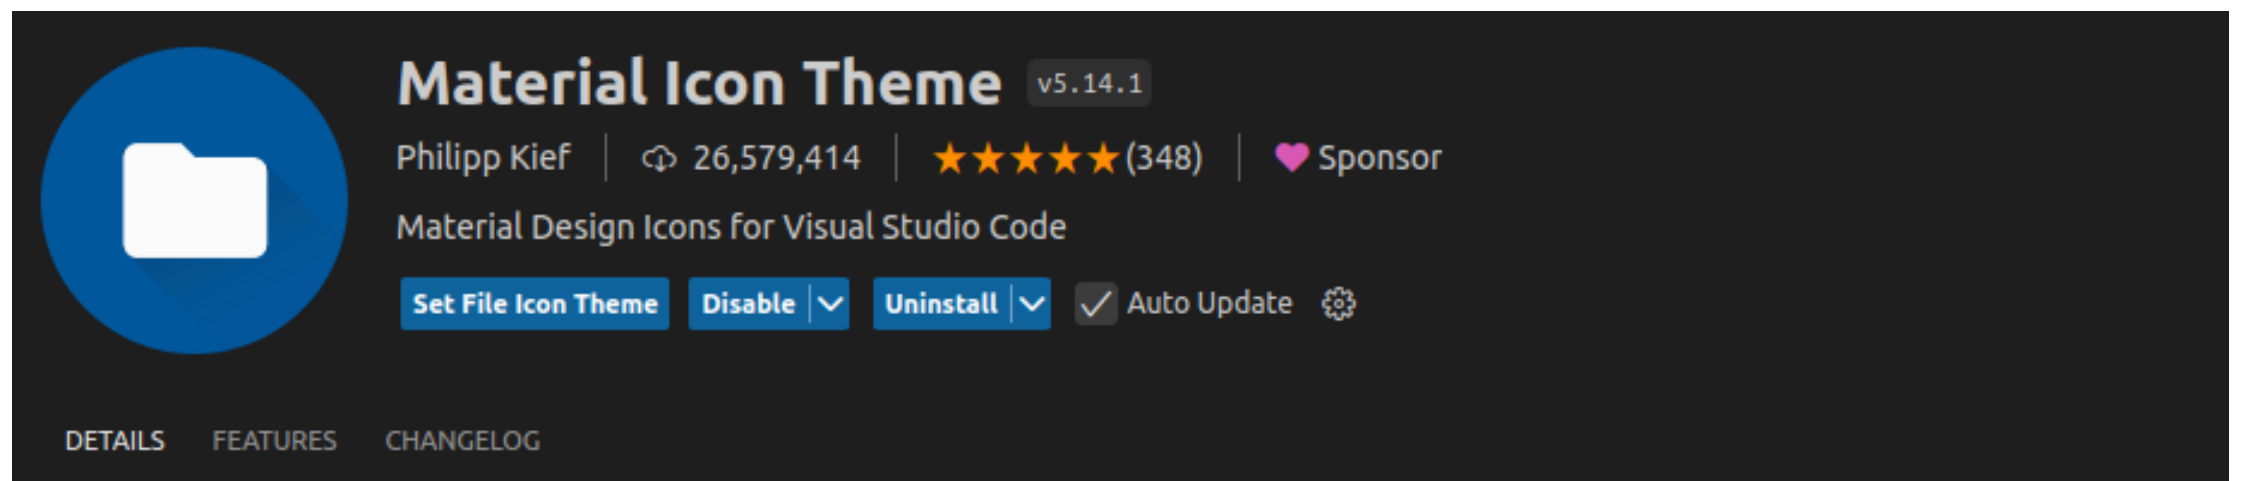

# Prettier :-

Prettier is a must-have code formatter that ensures your code is clean, consistent, and readable. It automatically applies formatting rules for multiple languages, saving you time and maintaining a professional codebase.

# Material Icon Theme :-

Material Icon Theme enhances the look of your VS Code workspace by adding visually appealing icons for files and folders. It helps you quickly identify file types and improves the overall organization of your project.

# Code Spell Checker :-

Code Spell Checker helps you catch spelling errors in your code, comments, and documentation. It's a lightweight extension that ensures your work looks polished and professional, especially in collaborative projects.
